

UniX Requirements

Login Screen

The UniX website is required to present users with a login screen. This is because the website uses an account system where individuals are able to see their enrollments. The login screen must be ergonomic and must not be confusing to use. The login page should offer a way for users to sign up if they do not have an existing account, as well as a recovery system for users who have forgotten their login credentials.

Forgot Password Screen

The forgot password screen is responsible for helping users recover their account in the event that they have forgotten their password. The screen needs to be ergonomic so users can quickly recover their account independently of the university's support team. The forgot password screen requires the user to enter the email address associated with their account, so that they can receive a one time link, to reset their password.

Forgot Password Screen with Error

The error screen for the forgot password system is responsible for conversing any errors that the system may have when sending a recovery link to their email address. Errors should be vague as to not allow people to reverse engineer account credentials.

Sign up Screen

The sign up screen is responsible for allowing users to register an account with the UniX service. The sign up screen should require users to enter all relevant personal information such as their name and email address, as well as allowing the user to set a password for their account.

Dashboard Screen

The dashboard screen should show users all of their current enrollments for both semester one and semester two. The screen should be easy to navigate and should not offer gimmicks. The screen must also have a way for users to sign out and access the enrollment page.

Semester Screen

The semester screen is where users select which semester they would like to enroll in. It should contain a way for the user to go back to the dashboard.

Semester Screen with Error

The semester error screen is presented to the user when an error has occurred while attempting to select a semester. This may be triggered for various reasons such as the user already being enrolled in the maximum number of courses or the user being suspended. The screen should have a way to go back to the dashboard as well as present a detailed error to the user.

Course Selection Screen

The course selection screen is where the user can enroll in a course for their selected semester. The screen should allow users to look up a course via its course code and display the results for the found courses below. Each result has an enroll hyper link below it, which allows the user to enroll.

Course Selection Screen with error

The course selection error screen is presented to the user when there has been an error enrolling them into the course. It is displayed on the result they attempted to enroll in, via the form of a relevant message.

Course Selection Screen with Success

The course selection success screen is presented to the user when they have successfully been enrolled into a course. It is conveyed to the user via text located on the course result they chose to enroll in.
